

YOUR BUSINESS CAN BENEFIT FROM THE GROWING DEMAND FOR SOLAR ENERGY

Ubbink has joined forces with ECTA and NAPIT to offer a complete route to MCS accreditation, giving the installer one point of contact and a step by step process to achieve this for Solar Photovoltaic Systems.

The 4 part process includes:

- Accredited training on Solar Photovoltaic Systems
- Template Quality Management System and unlimited telephone support
- MCS application (and first years membership if successful) with NAPIT
- Claim your money back when you have purchased 10kW of Ubbink PV Kits!

TO TAKE ADVANTAGE OF THIS OFFER, PHONE US ON 0844 800 9604 AND QUOTE 'UBBIÑK'

MCS ACCREDITATION FOR FREE?

THIS COULD BE THE BEST DEAL UNDER THE SUN

A SIMPLE, STEP-BY-STEP PROCESS...

STAGE 1: TRAINING

Through our partnerships with approved training centres throughout the UK, we can provide accredited training courses on Solar Photovoltaic Systems. Our partner centres are handpicked – all are experienced in delivering quality training and assessments, and are friendly, helpful and accommodating. These 3 day courses are aimed at those with basic electrical knowledge, and will cover the surveying, design, installation & commissioning of the systems, as well as fault finding and maintenance. You will also get the chance to inspect and work on Ubbink PV products.

STAGE 2: QUALITY MANAGEMENT SYSTEM TEMPLATE

As part of the package you will be provided with a template Quality Management System, which will give you the tools to build the procedures and information required by the Microgeneration Certification Scheme. This easy to use template comes with a guidance note, describing exactly what you will need to do to complete it with the information relevant to your company, and not only that, you will have access to unlimited telephone support during office hours, just in case you need any additional information or guidance.

Our fully trained team are on hand to answer any questions you may have in relation to the MCS scheme and how to meet its requirements.

STAGE 3: NAPIT MCS ACCREDITATION

Following technical training and support and guidance with your management systems, and having completed your first Ubbinks installation, you will be in a position to undertake the assessment for MCS accreditation for Solar Photovoltaic systems.

The NAPIT contact team will liaise with you to get a convenient date booked in to come and inspect your installation and quality management systems.

The assessment will require a site visit for each technology and a half day office audit, but don't worry, you should be well prepared with the advice and support from ECTA and recognised training from one of our partners.

Once you're accepted, you will feature on the main MCS register (www.microgenerationcertification.org) and be able to issue your customers with MCS installation certificates, giving them access to the Feed in Tariffs and other initiatives to support the introduction of renewable technology.

Also, alongside your MCS registration you might be thinking about meeting building regulations which may affect your

installation. Why not join the NAPIT competent persons scheme and combine your assessments for the reduced fee of £150 + VAT and be able to notify your electrical and plumbing work to building control and issue the homeowner with a buildings compliance certificate (dependant on qualifications).

In addition to Solar Photovoltaic, NAPIT can also offer MCS accreditation in the following technologies:

- Solar Thermal Hot Water
- Wind Turbines
- Heat Pumps (Ground & Air Source)
- Biomass Combustion

You can save yourself money by applying for any additional technologies at the same time as the Solar Photovoltaic systems, please contact us for pricing on any additional schemes.

STAGE 4: GET YOUR MONEY BACK!

This is simple – once you have purchased 10kW of Ubbink PV kits, simply send your original invoice for the training package along with receipts for the kits – and Ubbink will refund you the cost of the package!
